

A clearer product file

CSV cleanup sample | Fictional product data

SOURCE RECORDS	DUPLICATE MERGED	READY	NEED REVIEW
10	1	4	5

One duplicate, one record

Two tumbler entries match after spaces and unit labels are normalized. They become one record, with both source references retained.

Stage	SKU	Product	Unit	Price	Stock
Input 1	0001	Glass tumbler	pcs	12.50	8
Input 2	0001	Glass tumbler	piece	12.50	8
Result (sources 1 / 2)	0001	Glass tumbler	piece	12.50	8

Five records need a decision

SKU / product	Finding	Next step
0004 / Towel	Price is blank	Provide the price
0005 / Gel pen (2 records)	Prices differ: 2 and 3	Confirm the correct records
Notebook	SKU is blank	Provide the SKU
0006 / Printer paper	Stock is -1	Confirm the stock value

Zero stock is preserved: 0002 / Dinner plate stays at 0. Leading-zero SKUs such as 0001 stay intact.

What arrives in the delivery

The original CSV, all processed records with status, a separate review file, and the four records that pass the selected checks. Every processed record includes its source-row reference.

This sample checks selected fields and rules. The review file makes unresolved values easy to find and confirm.

Excel tip: import the SKU column as Text. Source references start at the first data row, after the header.
